

ABSTRACT

According to the present invention, provided are

an intraorally rapidly disintegrable tablet which comprises D-mannitol and a disintegrator in addition to fine granules prepared by granulating a mixture of a water-soluble pharmacologically active ingredient and an adsorbent;

a process for producing an intraorally rapidly disintegrable tablet which comprises mixing D-mannitol and a disintegrator with fine granules prepared by granulating a mixture of a water-soluble pharmacologically active ingredient and an adsorbent to yield a material for compression molding, and subjecting the material to compression molding; and

an intraorally rapidly disintegrable tablet which is prepared by mixing D-mannitol and a disintegrator with fine granules prepared by granulating a mixture of a water-soluble pharmacologically active ingredient and an adsorbent to yield a material for compression molding, subjecting the material to compression molding.
